Retrospective Sprint 3

What went well: Tasks are distributed equally and early, but overall, this sprint has so many unfinished tasks/in progress. We started sprint 3 a bit late because we allotted some of our time to finish our sprint 2 unfinished tasks. We are working as one to teach some of our members who's having difficulty in coding their part.

What could be improved: Recognizing deadlines since we always have unfinished tasks/in progress. Coding guidelines for readability. PHP error handling and security for our system.

What needs to be done: We are aiming to finish all the unfinished tasks/in progress this Sunday. In our sprint 4, we are aiming to start connecting the database, and to add the JavaScript functions for buttons functionality/behavior, and rechecking of our sprint 3 codes to spot things we need to improve.
